

Auto Adjusting Courtroom Monitors

If your monitor display is skewed to the left or right, it will need to be auto-adjusted. This is a simple process that takes a few seconds.

The default resolution for the Courtroom video systems is 1024x768 with a refresh rate of around 60Hz. Because laptop computer graphics are evolving at an incredibly fast pace, most laptops are no longer set to this resolution and plugging them in to the system will cause the monitors to skew.

Before connecting your laptop to our system, have check the settings and change them if necessary. This should prevent the monitor display from shifting. If it does not, please follow the steps below:

- Press the MENU button
- Press the MINUS button TWICE (Auto Adjust will be highlighted)
- Press the MENU button (screen will flicker and re-adjust)

When the menu screen re-appears...

- Press the PLUS button TWICE (Exit will be highlighted)
- Press the MENU button

DONE.
